HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

Claim Rejections - 35 USC § 102

The rejection of claims 10 and 11 under 35 U.S.C. 102(b) as being anticipated by Mainelis et al. (Aerosol Science and Technology, 1997, vol. 30, pages 127-144; IDS ref # 45), made in the Office Action mailed on August 12, 2009 is withdrawn in view of the Amendment received on February 12, 2010, canceling the rejected claims.

The rejection of claims 10-14 under 35 U.S.C. 102(b) as being anticipated by Mainelis et al. (Aerosol Science and Technology, 2002, vol. 36, pages 1073-1085; IDS ref# 47), made in the Office Action mailed on August 12, 2009 is withdrawn in view of the Amendment received on February 12, 2010, canceling the rejected claims.

Claim Rejections - 35 USC § 103

The rejection of claims 10-16 under 35 U.S.C. 103(a) as being unpatentable over Birmingham et al. (U.S. Patent No. 5,989,824, issued November 23, 1999) in view of Mainelis et al. (Aerosol Science and Technology February 2002, vol. 36, pages 1073-1085; IDS¹ ref# 47), as applied to claims 1, 2, and 17 above, and further in view of Johns et al. (Letters in Applied Microbiology, 1994, vol. 18, pages 236-238; IDS⁴ ref# 38), made in the Office Action mailed on August 12, 2009 is withdrawn in view of the Amendment received on February 12, 2010, canceling the rejected claims.

Art Unit: 1637

The rejection of claim 9 under 35 U.S.C. 103(a) as being unpatentable over Birmingham et al. (U.S. Patent No. 5,989,824, issued November 23, 1999) in view of Mainelis et al. (Aerosol Science and Technology February 2002, vol. 36, pages 1073-1085; IDS³ ref# 47), as applied to claims 1, 2, and 17 above, and further in view of Johns et al. (Letters in Applied Microbiology, 1994, vol. 18, pages 236-238; IDS⁴ ref# 38), made in the Office Action mailed on August 12, 2009 is withdrawn in view of the arguments presented in the Amendment received on February 12, 2010.

Double Patenting

The provisional rejection of claims 1-9 on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of copending Application No. 10/590,630, made in the Office Action mailed on August 12, 2009 is withdrawn in view of the Terminal Disclaimer received on February 12, 2010.

The provisional rejection of claims 1-13 on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18 of copending Application No. 10/590,632, made in the Office Action mailed on August 12, 2009 is withdrawn in view of the Terminal Disclaimer received on February 12, 2010.

Examiner's Reasons for Allowance

Lee et al. (Sensors and Actuators, 1999, vol. 73, pages 74-79: IDS) disclose a device which comprises at least two electrodes which are separated by less than 20 mm, wherein the device comprises a chamber (housing said sensors), wherein the chamber is connected to an inlet and an outlet channel (page 75, Figure 3). Lee et al. disclose the sensor can be used to lyse cells from various sources. Lee et al., however, employs cells which are introduced via an aqueous medium (“the cell and the medium are pumped into the channel...”, page 75). Therefore, Lee et al. do not disclose or suggest that gaseous sample be used in their method. The cells in the medium are directed toward the electrodes via liquid flow (although electrostatic attraction is employed as well), which is mechanically different from the instantly claimed method which explicitly requires that the gaseous sample is treated with a first potential created between a first and a second electrode, and the “collection” of a biological particle in the gaseous sample is effected solely via said potential.

Mainelis et al. (of record), while disclosing that bacterial spores can be collected via electrostatic potential, do not disclose or suggest for a device having a chamber which comprises a volume of 500 μL or lesser. Mainelis et al. also do not disclose or suggest contacting the captured biological particles with a first liquid in the same chamber and subjecting the collected biological particle to further analysis.

Birmingham et al. (of record), while disclosing a method of collecting biological samples via electrostatic mechanism, do not disclose or suggest that the device comprise two electrodes. The mechanism by which the collected samples are analyzed is also not in the manner in which the instant method conducts, as Birmingham et al. do not introduce the liquid in the same chamber in where the biological particles are collected.

Art Unit: 1637

Therefore, it is determined that Lee et al., while disclosing a method of lysing cells introduced into the device via an aqueous medium, would not have motivated a one of ordinary skill in the art to use the same device for the collection of biological particles from gaseous samples. While Mainelis et al. disclose a method of collection of biological particles from air (thus gaseous sample), Mainelis et al. or Lee et al. direct the artisan to introduce a liquid to chamber where the biological particles are collected for analysis. While Birmingham et al. disclose a method and device for collection of biological particles from air and their analysis, the mechanism by which Birmingham et al. employs is incompatible with the teachings of Lee et al. or Mainelis et al, thereby failing to motivate the artisan to combine and to have a reasonable expectation of success at combining the teachings.
